# The Source $CODE

Introduction

$CODE is an experimental project created to maximize the benefits of decentralization through community culture and growth. $CODE aims to be a guiding light of inclusivity by providing cryptocurrency technology access for everyone.

Many projects fail to cultivate innovators because they don't include their community in their endeavors or important decisions. They layer themselves in utility to settle on centric or centralized use-cases limiting the access to creativity. $CODE removes those limits by welcoming diverse ideas and elements to aid in the growth of the community, all while having fun in the process. By nurturing an environment where the community is encouraged to develop the utilities, we will ultimately strive to achieve a welcoming, supportive and more inclusive community.

Tokenomics

$CODE debuted on the Ethereum blockchain with an ethos: prioritizing dedication over hype, patience over speculation and long term vision over gains.

Featuring a supply of 1,010,101,010,101 tokens, our framework encourages investment and value growth. There are no team tokens, no treasury tokens, no promise or utility. The entire supply was released on chain for the members to pursue $CODE's ethos and grow together as a community.

Token Contract: 0x283344eea472f0fe04d6f722595a2fffefe1901a
Uniswap Pair: 0x3be023902ea4120cacdc803e5801d9b117381ac0
Buy Tax: 0%
Sell Tax: 0%
Contract: Renounced

Liquidity and Distribution:

Upon the token's release, liquidity was promptly injected into Uniswap to give birth to $CODE and provide the opportunity for others to become part of this experimental community. Liquidity was secured through Uni crypt with a lock period of 255 years. A secure token allows the community to focus on building.

The comprehensive token distribution strategy was unveiled on launch day, releasing 100% of CODE's supply in order to emphasize the crucial role of community participation and engagement.

The experiment settles on a path of community inclusion and contributions. Including financing projects and fostering an ecosystem of growth as a united decentralized front, rather than a centralized one. The fundamental intent is to give the power to the community to be equally important and able to use $CODE as a parameter for innovative and creative solutions. $CODE is an environment where cooperation takes precedence over rivalry.

$CODE stands firm in its commitment to community led and driven innovations. The same way lines of code grow and evolve over time, $CODE will grow and evolve over time by and through the common goals of the community driven initiatives.

Community Driven Initiatives

Community builders for CODE aim to create a dynamic environment that fosters collaboration and innovation among creators, innovators, and developers coming together from all walks of life with various skillset. This is achieved, by establishing a clear vision to cultivate a thriving sphere of influence that is ran completely decentralized by means of community leadership only.

To support this, a robust collaborative framework is essential. By utilizing already created communication channels such as forums, discord, telegram, and social media in order to bring in diverse resources and perspectives.

Active participation is promoted through community gatherings that connect experienced members with newcomers, recognizing and rewarding contributions to keep members motivated, and fostering an inclusive environment that welcomes diverse perspectives. This approach allows the community to remain vibrant, collaborative, and at the forefront of advancements impacting CODE as a whole.

In essence, you are CODE, and CODE grows because of you.
